The application has been amended as follows:

1. (Currently Amended) A communication apparatus comprising: an antenna for transmitting and/or receiving a wireless signal, a signal processing circuit for processing a signal corresponding to a wireless signal received by the antenna, a conductive case surrounding and housing all or part of the signal processing circuit, an electro-magnetic wave absorber permanently affixed with one surface adjacent a predetermined area of the conductive case for absorbing electro-magnetic waves emitted from the conductive case in a direction of a user and thereby reducing electro-magnetic waves reaching the user of the communication apparatus, a conductive member provided at another surface of the electro-magnetic wave absorber and being electrically connected to the conductive case, and further wherein the electro-magnetic wave absorber is physically

located between a speaker of the communication apparatus and the conductive case, the conductive member being located closest to the speaker, further comprising an outer housing separate from said conductive case, which surrounds and confines said conductive case, said electro-magnetic wave absorber, ~~said a~~ a microphone, said signal processing circuit, and said conductive member; and wherein said electro-magnetic wave absorber is permanently secured to a fixed position at a side of the conductive ~~shield~~ case.

3. (Currently Amended) A portable telephone comprising: an antenna for transmitting and/or receiving a wireless signal; a microphone for generating a sound signal corresponding to an input sound; a circuit for generating a wireless signal corresponding to said sound signal generated by said microphone; a conductive shield case surrounding and housing all or part of said circuit; an electro-magnetic wave absorber permanently affixed with one surface in contact with a predetermined area of the conductive shield case for absorbing electro-magnetic waves emitted from the conductive shield case in a direction of a user and thereby reducing the amount of electro-magnetic waves reaching a the user of said telephone device; and a conductive member provided at another surface of the ~~electric~~ electro-magnetic wave absorber and being electrically connected to the conductive shield case, and further wherein the electro-magnetic wave absorber is physically located between a speaker of the portable telephone and the conductive shield case, the conductive member being located closest to the speaker and further comprising an outer housing separate from said conductive

shield case, which surrounds and confines said conductive shield case, said electro-magnetic wave absorber, said microphone, said circuit, and said conductive member; and wherein said electro-magnetic wave absorber is permanently secured to a fixed position at a side of the conductive shield case.

Allowable Subject Matter

3. Claims 1-6, 8-16, 19, 20, 22, 23, and 25-27 are allowed.
